Live For Ads

Ad-to-Earn Telegram Mini App

Version 4.0 • Updated Draft

LFA

OVERVIEW

1. Abstract

Live For Ads (LFA) is a Telegram Mini App built around a simple idea: users check in daily, watch ads, complete light tasks, and refer friends to earn points. At the end of every two-month “season,” a share of real advertising revenue is pooled and distributed to the community based on each user's point allocation. The model is transparent, manually verified, and designed to reward genuine, active participation rather than automated or fraudulent activity.

This v3.0 update introduces a dual-currency points system — AP and UP — splits the former Ads tab into a renamed Earn page with two distinct sections, and adds a settings-based Profile with a live AP/UP balance breakdown. All other v2.0 systems (check-in streak, tasks, Leaderboard, referrals, live data sync) carry forward as described below.

OVERVIEW

2. Core Pages

The app runs entirely inside Telegram as a Mini App, requiring no separate download or account creation beyond a user's existing Telegram identity. Revenue is generated through partnered rewarded-ad networks and offerwall partners, and a share of that revenue is paid back to the community that generates it.

Page	What it does
Home	Daily check-in streak box, plus the daily task list below it.
Earn	Two sections: Offerwall (UP) up top, Sponsor Ads (AP) below.
Leaderboard	Top 100 ranked by AP, with a live top-3 podium. UP shown but not ranked.
Referral	Personal referral link, referred users list, and eligibility tracker.
LFA	Displays this public website directly inside the Mini App.
Profile	Avatar, AP/UP balances, stats (7-day / 30-day / all-time), settings, and withdrawal.

The team maintains full visibility into user points, referrals, task configuration, and withdrawal approvals to keep the system fair.

ENGAGEMENT

3. Daily Check-in & Streak

The Home page features a dedicated check-in box that runs on a weekly cycle, Monday through Sunday. Checking in is a single tap — the button claims that day's AP instantly. Completed days show a checkmark, today's box glows to invite the claim, and upcoming days stay blank until their turn.

Rule	Detail
Cycle	Monday to Sunday, tracked as a running streak count
First check-in	10 AP
Each following day	+5 AP over the previous day (10, 15, 20, 25...)
Missed a day	Streak breaks and restarts at 10 AP on the next check-in
Claim	One tap on the check-in button; claimed instantly
Reset	00:00 UTC (6:00 AM Bangladesh time), daily

Why it matters

The streak rewards consistency rather than one-off activity — and resetting to 10 AP after a missed day keeps the incentive to check in every single day, not just occasionally.

POINTS SYSTEM

4. AP & UP — Two Point Systems

Live For Ads tracks two separate balances, because they're funded two different ways and behave differently as a result.

	AP — Ad Points	UP — USD Points
Earned from	Check-ins, sponsor ads, tasks, referral commission	Offerwall tasks only
Value	Variable — depends on that season's ad revenue	Fixed — 100 UP = 1 USDT
Counts toward	Leaderboard rank, season payout pool	Its own USDT balance only

Offerwall partners pay a known, exact dollar amount per completed task, so UP converts at a fixed 1:1-scaled rate. Ad revenue fluctuates season to season, so AP is pooled and divided by each user's share instead of a fixed rate — see Section 13, Season System.

AD-TO-EARN

5. The Earn Page (formerly Ads)

The tab formerly called Ads is renamed Earn. At the top sit two buttons — Reward Wall and Ads — that switch between the two sections below, each paying a different currency.

Reward Wall (pays UP)

Cash-accurate tasks from offerwall partners — installing an app, completing a survey, signing up for an offer. Each one pays an exact USD amount, credited to the user as UP.

Rule	Detail
Conversion	100 UP = 1 USDT
Example	A \$0.20 offer credits 20 UP — exact, not estimated
Verification	May require connecting Gmail or Twitter once this section goes live

Ads (pays AP)

Tapping the Ads button opens 5 rewarded-video slots, played through partner ad networks (such as Adsgram or Monetag) in a short interstitial player. Each ad runs 14 seconds — closing it early means the view isn't counted and no AP is paid.

Rule	Detail
Points per ad	50 AP
Batch size	5 slots (reduced from 10)
Watch time	14 seconds, in full, to count
Cooldown	3 hours after the 5th ad, shown as a live countdown on the last slot's button
Per-company stats	A progress bar below the slots shows how many times each company's ad has been watched

How the cooldown works

Watching the 5th ad in a batch fills the progress bar and starts a 3-hour countdown right on that slot's button — no separate timer element, and no need to tap anything else. The button simply counts down from 3:00:00 to 0:00:00 and reopens automatically once it reaches zero.

ENGAGEMENT

6. Task System

Directly below the check-in box on the Home page sits the task list. Tasks are simple, visit-style actions that can be added or removed at any time, and always pay AP.

Rule	Detail
Points per task	50 AP

Rule	Detail
Currently live tasks	Subscribe to the Telegram channel, visit the website, view the whitepaper
Daily progress	Shown as a running counter (e.g. 0/20) across that day's available task slots
Reset	00:00 UTC (6:00 AM Bangladesh time), daily

POINTS SYSTEM

7. Where AP Comes From

AP is earned across four channels, all tied permanently to a user's Telegram ID rather than a device or session:

Daily check-in	10–40+ AP, streak-based
Sponsor ads	50 AP per ad watched, on the Earn page
Tasks	50 AP per completed task
Referrals	Fixed bonus + 10% ongoing commission, AP only (Section 8)

UP has exactly one source: the Offerwall section of the Earn page (Section 5). It is never earned from check-ins, sponsor ads, tasks, or referrals.

GROWTH

8. Referral Program

Referrals reward sustained engagement, not just sign-ups. The eligibility bar has been raised in this version to better reflect genuine, lasting activity.

Condition	Detail
Eligibility	Referred user watches 100 ads AND checks in on 7 separate days (raised from 25 ads)
Fixed bonus	100 AP, credited once the referral becomes eligible (raised from 25)
Ongoing commission	10% of the referred user's AP, for as long as they stay active

The 7-day check-in requirement counts total days checked in, not a running streak, so a referred user can spread those check-ins out and still qualify.

AP only, never UP

Referral bonuses and commission always pay in AP. UP is a separate, cash-accurate balance earned only through the Reward Wall (Section 5) — referrals never touch it.

What the Referral page shows

- Each referred user's name, with progress lines underneath for both the ad count and check-in days.
- A Pending or Eligible status badge for each referral.
- A colour-coded progress bar beneath the badge — shifting from deep red, through orange, to deep green as the referred user approaches full eligibility.
- A commission box in the middle of each entry, showing total AP commission earned from that specific referred user (separate from the one-time 100-AP bonus).
- Below the referral link: a summary bar totalling Referred, Eligible, and AP Earned across the whole referral network.

COMMUNITY

9. Leaderboard

The Leaderboard opens on All Time by default — the same lifetime AP ranking the app has always shown, now with each user's current check-in streak displayed alongside their rank. Two buttons switch to season-specific views: AP and UP.

View	Ranked by	Notes
All Time	Lifetime AP	Default view. Shows each user's streak; a missed check-in resets it to 0.
AP	This season's AP	Resets with each new season.
UP	This season's UP	Cash-accurate balance, shown for reference — doesn't affect AP rank.

- The top 3 users in any view appear on a podium, each avatar topped with a crown — gold for 1st, silver for 2nd, bronze for 3rd — alongside an up/down indicator showing recent rank movement.
- Ranks 4 through 100 are listed below in order.
- If a user's rank falls outside the top 100, their own rank, name, and value for that view still appear in a separate box beneath the list — so no one is simply left off the page.

ACCOUNT

10. Profile & Settings

Avatar and display name are pulled directly from a user's Telegram account — there's no separate profile editor. A settings icon in the corner covers the rest, so the top of the page can show what matters most: the user's two balances.

Settings menu item	Detail
Theme	Switch the app's visual theme

Settings menu item	Detail
Connect Gmail / Twitter	Disabled for now — will be enabled once the Reward Wall requires verification

Below the profile header, two balance cards show current totals, followed by a 7-day chart of AP and UP activity.

Card	Shows
Total AP	Sum of check-in + Ads + tasks + referral commission
Total UP	Reward Wall earnings only, with the live USDT-equivalent value at 100:1

The stats section further down still offers three views — last 7 days, last 30 days, and all-time — and every ad watched, task completed, or check-in claimed is reflected the moment it happens (see Section 12, Live Data Sync).

Withdraw

A Withdraw button on Profile opens a dedicated page covering AP allocation, UP conversion, and the wallet submission form — detailed in Section 14.

Season payouts, in the open

Below the Withdraw button, each past season gets its own public payout summary: participant count, total AP, that season's AP allocation in USDT, total UP, UP converted to USDT, and the combined total paid out. Expanding a season reveals the paid list — usernames alongside a partially masked wallet address (first and last 5 characters only, with the middle hidden) and the total USDT each user withdrew that season.

IN-APP

11. The LFA Page

A tab labelled LFA, positioned directly before Profile in the navigation, opens this same public website inside the Telegram Mini App — giving users a way to read the latest whitepaper, Terms & Privacy Policy, mechanics, and roadmap without leaving the bot.

TECHNICAL

12. Live Data Sync

All tabs — Home, Earn, Leaderboard, Referral, LFA, and Profile — stay in sync as a user moves between them. Watching an ad on the Earn page, for example, is reflected on the Profile tab's AP balance immediately, with no manual refresh or app restart required.

PAYOUTS

13. Season System

The project operates on a seasonal cycle to structure AP revenue pooling and give the community predictable milestones. Pool calculation is performed once every two months, covering the full season's accumulated ad revenue and community AP together. UP is unaffected by the season cycle, since it's already a fixed-rate USDT balance.

Period	Phase
September – October	Testing Season
November – December	Season 0
January onward	Season 1, and subsequent seasons

PAYOUTS

14. Withdrawal & Payout

The withdrawal wallet-address box on the Withdraw page is visible year-round, but only accepts a submission during a two-day window that recurs every two months, aligned with the season calendar.

Window	Opens	Closes
Recurring pattern	1st of the month, 6:00 AM UTC	2nd of the month, 11:59 PM UTC
Season 0 example	November 1, 6:00 AM UTC	November 2, 11:59 PM UTC
Following window	January 1, 6:00 AM UTC	January 2, 11:59 PM UTC

AP Allocation

Each season, total ad revenue is divided by the community's combined AP to produce a USDT-per-AP rate. Multiplying that rate by a user's own AP gives their AP allocation — shown as \$0.00 until that season's revenue figure is finalized.

The shortcut

$(\text{season ad revenue} \div \text{total community AP}) \times \text{a user's own AP} = \text{that user's AP allocation in USDT.}$

UP conversion

A swap section on the Withdraw page converts UP to USDT at the fixed 100:1 rate, with a Max button to convert the full balance at once. The converted amount adds directly to the AP allocation above, so the Withdraw page shows one combined total — broken down into how much came from AP and how much from UP.

- Review: submitted requests are manually reviewed and approved after the window closes.
- Payout method: USDT, sent to the wallet address submitted, on Polygon or opBNB.

AP has no fixed conversion rate

AP payout amount is determined by that season's allocation calculation — not a pre-set point-to-dollar ratio. UP is different: it already converts at a fixed 100:1 rate, independent of season timing.

INTEGRITY

15. Anti-Fraud & Integrity Measures

- Persistent identity tracking: progress is tied permanently to a user's Telegram ID.
- Referral eligibility threshold: a referred account needs 100 watched ads and 7 check-in days before it counts.
- Streak-break penalty: missing a check-in day resets the streak to its base value, discouraging bursty, farmed activity in favour of steady engagement.
- Full-length ad views: an ad only counts, and only pays AP, if watched for the full 14 seconds.
- Time-boxed withdrawals: wallet submissions are only accepted during the scheduled two-day window each season, narrowing the surface for abuse.
- Manual withdrawal approval: every payout is reviewed before funds are sent.
- Public payout transparency: each season's participant count, totals, and paid list are published on Profile, with wallet addresses partially masked.

FUTURE OUTLOOK

16. The LFA Token

Live For Ads is designed to grow beyond a points-and-payout system. As the community and ad revenue scale, the project intends to explore launching its own token, LFA, on-chain.

The long-term idea is straightforward: the same engagement that earns AP today — checking in daily, watching ads, completing tasks, referring friends — becomes the foundation for a token economy tomorrow. Early, active community members would be positioned to benefit most from this transition, since AP, UP, and season activity are being tracked from day one.

Not a current commitment

This is a forward-looking direction, not a current commitment. No token exists yet, no launch date is set, and nothing here should be treated as a promise of value. If and when a token launch becomes viable, full details — supply, distribution, utility, and timeline — will be published in a dedicated update to this whitepaper.

WHAT'S NEXT

17. Roadmap

- Sep – Oct: Testing Season — check-in streaks, the Earn page (Reward Wall + Ads), tasks, and Leaderboard live for feedback and bug fixes.

- Nov – Dec: Season 0 — first live season, first AP pool distribution.
- Jan onward: Season 1 — full public rollout, community growth push.
- Future: additional ad network and offerwall integrations, Gmail/Twitter verification for the Reward Wall, an expanded task catalogue, and exploration of the LFA token launch pending community growth.

LEGAL

18. Disclaimer

This document describes the intended design and mechanics of the project as of its current development stage. Features, point values, ratios, timelines, and the potential LFA token described above may be adjusted as the project develops. This is not a guarantee of returns; AP payouts depend entirely on actual advertising revenue generated and community size, and UP payouts depend on offerwall partner availability. Nothing in this document constitutes financial or investment advice. For the full legal terms and privacy practices, see the separate Live For Ads Terms of Service & Privacy Policy document.
